| 10     | Mixed Higher Geometry and Measures Problem Solving   | G1-G25 synthesis    | ___ / ___ |

## Book structure

- 8 purposeful fluency questions per module
- 12 Standard Higher questions per module
- 15 multi-step Higher exam questions per module
- 10 Grade 7-9 challenge questions per module
- Formula and method bank for every module
- All answers, formulas and worked methods at the end

## Unit 4 Specification Coverage Map

### INDEPENDENTLY AUTHORED PRACTICE MAP

# How to Use and Check Your Work

## STUDENT ROUTINE AND QUALITY STANDARD

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / \_\_\_\_\_

**1 Attempt** Work without notes first. Draw and label the geometry, then select a theorem, formula, vector or trigonometric relationship.

**2 Mark** Use the worked answer. Credit a method only when its mathematical setup is visible.

**3 Repair** Identify whether the error was modelling, units, algebra, arithmetic or interpretation; then redo from blank.

**4 Retest** Repeat a similar question after 2-7 days without support.

**5 Present** Give exact values where appropriate, sensible accuracy, units and a concluding statement.

### Higher answer standard

- Define the variables and governing relationship
- State the geometric reason or theorem at every reasoning step
- Keep exact values and unrounded calculator values until the final line
- Distinguish average rates (chords) from instantaneous rates (tangents)
- Check whether a result is physically and mathematically reasonable

# Angle Reasoning, Congruence, Constructions and Loci

## FLUENCY CHECK

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_ / \_\_\_\_

*A short prerequisite check. Work accurately, then move promptly to Higher demand.*

**1. A regular 7-gon has an exterior angle of  $360/7^\circ$ . Find its interior angle and explain the relationship. [U4-M01-Q01] [2 marks]**

---

---

---

---

**2. An isosceles triangle has vertex angle  $26^\circ$ . A line through the vertex is perpendicular to the base. Prove that it bisects the vertex angle. [U4-M01-Q02] [3 marks]**

---

---

---

---

---

**3. Two parallel lines are cut by transversals forming a triangle. Two interior angles are  $40^\circ$  and  $63^\circ$ . Find the third angle and justify every angle fact. [U4-M01-Q03] [3 marks]**

---

---

---

---

---

**4. The interior angle of a regular polygon is  $147.273^\circ$ . Determine its number of sides without measuring. [U4-M01-Q04] [3 marks]**

---

---

---

---

---

**5. Triangles ABC and DEF have  $AB=10$ ,  $AC=13$ , angle  $A=52^\circ$ ,  $DE=10$ ,  $DF=13$ , angle  $D=52^\circ$ . Prove the triangles congruent and state one result that follows. [U4-M01-Q05] [3 marks]**

---

---

---

---

---

**6. Describe accurately the locus of points inside an angle that are equidistant from its sides and at most 3 cm from its vertex. State the construction boundaries. [U4-M01-Q06] [3 marks]**

---

---

---

---

---

**7. A quadrilateral has one pair of opposite sides equal and parallel. Prove it is a parallelogram using a diagonal and triangle congruence (case 7). [U4-M01-Q07]**  
[4 marks]

---

---

---

---

**8. The angles of a 8-gon are in the ratio 2:3:4:5:6:6:6:6. Explain how to find every angle and calculate the scale unit. [U4-M01-Q08] [4 marks]**

---

---

---

---

# Angle Reasoning, Congruence, Constructions and Loci

## STANDARD HIGHER • PART A

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_ / \_\_\_\_

*Higher-tier application. Show the governing relationship and exact working.*

**1. Explain why SSA data do not guarantee triangle congruence, and describe how a construction can show this ambiguity (example 9). [U4-M01-Q09] [4 marks]**

---

---

---

---

---

---

**2. A regular 8-gon has an exterior angle of  $360/8^\circ$ . Find its interior angle and explain the relationship. [U4-M01-Q10] [3 marks]**

---

---

---

---

---

---

**3. An isosceles triangle has vertex angle  $44^\circ$ . A line through the vertex is perpendicular to the base. Prove that it bisects the vertex angle. [U4-M01-Q11] [4 marks]**

---

---

---

---

---

---

**4. Two parallel lines are cut by transversals forming a triangle. Two interior angles are  $49^\circ$  and  $65^\circ$ . Find the third angle and justify every angle fact. [U4-M01-Q12] [4 marks]**

---

---

---

---

---

---

**5. The interior angle of a regular polygon is  $144^\circ$ . Determine its number of sides without measuring. [U4-M01-Q13] [4 marks]**

---

---

---

---

---

---

**6. Triangles ABC and DEF have  $AB=9$ ,  $AC=12$ , angle  $A=52^\circ$ ,  $DE=9$ ,  $DF=12$ , angle  $D=52^\circ$ . Prove the triangles congruent and state one result that follows. [U4-M01-Q14] [4 marks]**

---

---

---

---

---

---

# Angle Reasoning, Congruence, Constructions and Loci

## STANDARD HIGHER • PART B

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_ / \_\_\_\_

Continue the Higher set. Interpret each result in context.

**7. Describe accurately the locus of points inside an angle that are equidistant from its sides and at most 7 cm from its vertex. State the construction boundaries. [U4-M01-Q15] [4 marks]**

---

---

---

---

---

---

---

---

**8. A quadrilateral has one pair of opposite sides equal and parallel. Prove it is a parallelogram using a diagonal and triangle congruence (case 16). [U4-M01-Q16] [4 marks]**

---

---

---

---

---

---

---

---

**9. The angles of a 5-gon are in the ratio 2:3:4:5:6. Explain how to find every angle and calculate the scale unit. [U4-M01-Q17] [4 marks]**

---

---

---

---

---

---

---

---

**10. Explain why SSA data do not guarantee triangle congruence, and describe how a construction can show this ambiguity (example 18). [U4-M01-Q18] [4 marks]**

---

---

---

---

---

---

---

---

**11. A regular 9-gon has an exterior angle of  $360/9^\circ$ . Find its interior angle and explain the relationship. [U4-M01-Q19] [3 marks]**

---

---

---

---

---

---

---

---

**12. An isosceles triangle has vertex angle  $62^\circ$ . A line through the vertex is perpendicular to the base. Prove that it bisects the vertex angle. [U4-M01-Q20] [4 marks]**

---

---

---

---

---

---

---

---

# Angle Reasoning, Congruence, Constructions and Loci

## MULTI-STEP HIGHER • PART A

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / \_\_\_\_\_

*Original multi-step exam-style questions. Show every connected stage.*

**1. Two parallel lines are cut by transversals forming a triangle. Two interior angles are  $58^\circ$  and  $67^\circ$ . Find the third angle and justify every angle fact. [U4-M01-Q21] [4 marks]**

---

---

---

---

---

---

---

---

**2. The interior angle of a regular polygon is  $140^\circ$ . Determine its number of sides without measuring. [U4-M01-Q22] [4 marks]**

---

---

---

---

---

---

---

---

**3. Triangles ABC and DEF have  $AB=8$ ,  $AC=11$ , angle  $A=52^\circ$ ,  $DE=8$ ,  $DF=11$ , angle  $D=52^\circ$ . Prove the triangles congruent and state one result that follows. [U4-M01-Q23] [4 marks]**

---

---

---

---

---

---

---

---

**4. Describe accurately the locus of points inside an angle that are equidistant from its sides and at most 6 cm from its vertex. State the construction boundaries. [U4-M01-Q24] [4 marks]**

---

---

---

---

---

---

---

---

**5. A quadrilateral has one pair of opposite sides equal and parallel. Prove it is a parallelogram using a diagonal and triangle congruence (case 25). [U4-M01-Q25] [4 marks]**

---

---

---

# Angle Reasoning, Congruence, Constructions and Loci

## MULTI-STEP HIGHER • PART B

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / \_\_\_\_\_

Continue the multi-step set. Explain decisions where requested.

**6. The angles of a 6-gon are in the ratio 2:3:4:5:6:6. Explain how to find every angle and calculate the scale unit. [U4-M01-Q26] [4 marks]**

---

---

---

---

---

---

**7. Explain why SSA data do not guarantee triangle congruence, and describe how a construction can show this ambiguity (example 27). [U4-M01-Q27] [4 marks]**

---

---

---

---

---

---

**8. A regular 10-gon has an exterior angle of  $360/10^\circ$ . Find its interior angle and explain the relationship. [U4-M01-Q28] [3 marks]**

---

---

---

---

---

---

**9. An isosceles triangle has vertex angle  $80^\circ$ . A line through the vertex is perpendicular to the base. Prove that it bisects the vertex angle. [U4-M01-Q29] [4 marks]**

---

---

---

---

---

---

**10. Two parallel lines are cut by transversals forming a triangle. Two interior angles are  $67^\circ$  and  $62^\circ$ . Find the third angle and justify every angle fact. [U4-M01-Q30] [4 marks]**

---

---

---

---

---

---

# Angle Reasoning, Congruence, Constructions and Loci

## MULTI-STEP HIGHER • PART C

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / \_\_\_\_\_

Complete the multi-step set. Check units, accuracy and reasonableness.

**11. The interior angle of a regular polygon is  $135^\circ$ . Determine its number of sides without measuring. [U4-M01-Q31] [4 marks]**

---

---

---

---

---

---

**12. Triangles ABC and DEF have  $AB=7$ ,  $AC=10$ , angle  $A=52^\circ$ ,  $DE=7$ ,  $DF=10$ , angle  $D=52^\circ$ . Prove the triangles congruent and state one result that follows. [U4-M01-Q32] [4 marks]**

---

---

---

---

---

---

**13. Describe accurately the locus of points inside an angle that are equidistant from its sides and at most 5 cm from its vertex. State the construction boundaries. [U4-M01-Q33] [4 marks]**

---

---

---

---

---

---

**14. A quadrilateral has one pair of opposite sides equal and parallel. Prove it is a parallelogram using a diagonal and triangle congruence (case 34). [U4-M01-Q34] [4 marks]**

---

---

---

---

---

---

**15. The angles of a 7-gon are in the ratio 2:3:4:5:6:6:6. Explain how to find every angle and calculate the scale unit. [U4-M01-Q35] [4 marks]**

---

---

---

---

---

---

# Angle Reasoning, Congruence, Constructions and Loci

## GRADE 7-9 CHALLENGE • PART A

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / \_\_\_\_\_

*Extended reasoning. Plan the model before calculating.*

**1. Explain why SSA data do not guarantee triangle congruence, and describe how a construction can show this ambiguity (example 36). [U4-M01-Q36] [4 marks]**

---

---

---

---

---

---

**2. A regular 11-gon has an exterior angle of  $360/11^\circ$ . Find its interior angle and explain the relationship. [U4-M01-Q37] [4 marks]**

---

---

---

---

---

---

**3. An isosceles triangle has vertex angle  $98^\circ$ . A line through the vertex is perpendicular to the base. Prove that it bisects the vertex angle. [U4-M01-Q38] [5 marks]**

---

---

---

---

---

---

**4. Two parallel lines are cut by transversals forming a triangle. Two interior angles are  $76^\circ$  and  $64^\circ$ . Find the third angle and justify every angle fact. [U4-M01-Q39] [5 marks]**

---

---

---

---

---

---

**5. The interior angle of a regular polygon is  $158.824^\circ$ . Determine its number of sides without measuring. [U4-M01-Q40] [5 marks]**

---

---

---

---

---

---

# Angle Reasoning, Congruence, Constructions and Loci

## GRADE 7-9 CHALLENGE • PART B

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_ / \_\_\_\_

Complete the challenge set. Present a clear mathematical argument.

**6. Triangles ABC and DEF have  $AB=6$ ,  $AC=9$ , angle  $A=52^\circ$ ,  $DE=6$ ,  $DF=9$ , angle  $D=52^\circ$ . Prove the triangles congruent and state one result that follows. [U4-M01-Q41] [5 marks]**

---

---

---

---

---

---

---

---

**7. Describe accurately the locus of points inside an angle that are equidistant from its sides and at most 4 cm from its vertex. State the construction boundaries. [U4-M01-Q42] [5 marks]**

---

---

---

---

---

---

---

---

**8. A quadrilateral has one pair of opposite sides equal and parallel. Prove it is a parallelogram using a diagonal and triangle congruence (case 43). [U4-M01-Q43] [4 marks]**

---

---

---

---

---

---

---

---

**9. The angles of a 8-gon are in the ratio 2:3:4:5:6:6:6:6. Explain how to find every angle and calculate the scale unit. [U4-M01-Q44] [4 marks]**

---

---

---

---

---

---

---

---

**10. Explain why SSA data do not guarantee triangle congruence, and describe how a construction can show this ambiguity (example 45). [U4-M01-Q45] [4 marks]**

---

---

---

---

---

---

---

---

# Transformations, Similarity and Scale Factors

## FLUENCY CHECK

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_ / \_\_\_\_

*A short prerequisite check. Work accurately, then move promptly to Higher demand.*

**1. Enlarge  $P(2,-3)$  about  $C(1,-2)$  by scale factor  $-3$ . Give  $P'$ . [U4-M02-Q01] [2 marks]**

---

---

---

**2. Two similar shapes have length scale factor  $1.5$ . The smaller area is  $49 \text{ cm}^2$ . Find the larger area and explain the exponent used. [U4-M02-Q02] [3 marks]**

---

---

---

---

**3. Similar solids have volume ratio  $1:64$ . The smaller volume is  $50 \text{ cm}^3$ . Find the larger volume and the length scale factor. [U4-M02-Q03] [3 marks]**

---

---

---

---

**4. Describe the single transformation equivalent to reflection in the x-axis followed by reflection in the y-axis (case 4). [U4-M02-Q04] [3 marks]**

---

---

---

---

**5. A triangle is transformed by rotation  $90^\circ$  clockwise about  $(2,-1)$ , then translation by vector  $(3,4)$ . Explain which properties are invariant and whether the combined transformation is a rotation alone (case 5). [U4-M02-Q05] [4 marks]**

---

---

---

---

**6. Similar shapes have corresponding lengths  $10$  and  $13$ . The smaller area is  $40 \text{ cm}^2$ . Find the larger area. [U4-M02-Q06] [4 marks]**

---

---

---

---

**7. Prove that a rotation followed by its inverse maps every point back to itself, using centre-to-point vectors (case 7). [U4-M02-Q07] [4 marks]**

---

---

---

---

---

**8. A photograph is enlarged with width scale factor  $\frac{3}{2}$  and then reduced with scale factor  $-\frac{2}{3}$  about a different centre. State the overall size factor and explain the negative sign (case 8). [U4-M02-Q08] [4 marks]**

---

---

---

---

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / \_\_\_\_\_

*Extended reasoning. Plan the model before calculating.*

**1. A sector of radius 6 cm has perimeter  $12+5\pi$  cm. Determine its angle by forming an arc-length equation. [U4-M04-Q36] [4 marks]**

---

---

---

---

---

---

**2. A circle has area  $245\pi$  cm<sup>2</sup>. Find its radius and circumference exactly. [U4-M04-Q37] [4 marks]**

---

---

---

---

---

---

**3. Two similar sectors have radii 8 and 11. The smaller area is  $45\pi$  cm<sup>2</sup>. Find the larger area. [U4-M04-Q38] [4 marks]**

---

---

---

---

---

---

**4. A regular 8-gon is inscribed in a circle radius 9. Split it into congruent triangles and state an exact area expression. [U4-M04-Q39] [5 marks]**

---

---

---

---

---

---

**5. A circular path has outer radius 12 m and inner radius 10 m. Find its exact area and the cost at £13 per m<sup>2</sup>. [U4-M04-Q40] [4 marks]**

---

---

---

---

---

---

# Mensuration, Circles, Sectors and Composite Areas

## GRADE 7-9 CHALLENGE • PART B

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / \_\_\_\_\_

Complete the challenge set. Present a clear mathematical argument.

**6. Find exactly the area and circumference of a circle of radius 3 cm. [U4-M04-Q41] [2 marks]**

---

---

---

---

---

**7. A sector has radius 4 cm and angle  $105^\circ$ . Find its area and arc length exactly. [U4-M04-Q42] [3 marks]**

---

---

---

---

---

**8. A shape consists of a 10 by 9 rectangle with a semicircle of diameter 10 attached. Find its exact area and perimeter. [U4-M04-Q43] [4 marks]**

---

---

---

---

---

**9. A sector of radius 6 cm has perimeter  $12+4.5\pi$  cm. Determine its angle by forming an arc-length equation. [U4-M04-Q44] [4 marks]**

---

---

---

---

---

**10. A circle has area  $245\pi$  cm<sup>2</sup>. Find its radius and circumference exactly. [U4-M04-Q45] [4 marks]**

---

---

---

---

---

# 3D Geometry, Surface Area, Volume and Frustums

## FLUENCY CHECK

HIGHER TIER • SHOW CLEAR WORKING • KEEP EXACT VALUES WHERE REQUIRED

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_ / \_\_\_\_

*A short prerequisite check. Work accurately, then move promptly to Higher demand.*

**1. Find the volume and total surface area of a cylinder radius 3 cm, height 5 cm. [U4-M05-Q01] [3 marks]**

---

---

---

---

**2. Find the volume and surface area of a sphere radius 4 cm in exact form. [U4-M05-Q02] [3 marks]**

---

---

---

---

**3. A cone has radius 5 cm, height 7 cm and slant height  $\sqrt{74}$ . Find volume and total surface area. [U4-M05-Q03] [4 marks]**

---

---

---

---

**4. A square-based pyramid has base side 8 cm and perpendicular height 8 cm. Find its volume. [U4-M05-Q04] [3 marks]**

---

---

---

---

**5. A frustum is made by removing a similar cone of linear scale factor  $\frac{1}{3}$  from a cone of volume  $168\pi \text{ cm}^3$ . Find the frustum volume. [U4-M05-Q05] [5 marks]**

---

---

---

---

**6. A solid consists of a hemisphere radius 8 on a cylinder of the same radius and height 10. Find its exact volume. [U4-M05-Q06] [4 marks]**

---

---

---

---

**7. Similar containers have surface-area ratio 81:121. Their volume difference is  $130 \text{ cm}^3$ . Form an equation for the smaller volume. [U4-M05-Q07] [5 marks]**

---

---

---

---

---

**8. A sphere of radius 10 is melted into cones radius 5, height 5. Find the exact number of complete cones possible. [U4-M05-Q08] [5 marks]**

**Marking reminder:** a correct setup can earn method marks even when a later arithmetic error occurs.

## Circle measures

Arc length  $= (\theta/360) \times 2\pi r$ ; sector area  $= (\theta/360) \times \pi r^2$ .

## Pythagoras & trigonometry

$a^2 + b^2 = c^2$ ;  $\sin \theta = \text{opposite/hypotenuse}$ ;  $\cos \theta = \text{adjacent/hypotenuse}$ ;  $\tan \theta = \text{opposite/adjacent}$ .

## Non-right triangles

$a/\sin A = b/\sin B = c/\sin C$ ;  $c^2 = a^2 + b^2 - 2ab \cos C$ ; area  $= \frac{1}{2}ab \sin C$ .

## Similarity

Length factor  $k$ ; area factor  $k^2$ ; volume factor  $k^3$ .

## Coordinate geometry

Gradient  $= (y_2 - y_1)/(x_2 - x_1)$ ; midpoint  $= ((x_1 + x_2)/2, (y_1 + y_2)/2)$ ; perpendicular gradients multiply to  $-1$ .

## Vectors

$\vec{AB} = \vec{OB} - \vec{OA}$ ; divide a segment by adding the required fraction of its displacement vector.

## Mensuration

Cylinder volume  $= \pi r^2 h$ ; cylinder TSA  $= 2\pi r^2 + 2\pi r h$ ; prism volume  $= \text{cross-sectional area} \times \text{length}$ .

## Bearings

Measure clockwise from north and write with three figures. Use a scale diagram or trigonometry.

## Polygons

Exterior angle sum  $= 360^\circ$ ; interior sum  $= (n-2) \times 180^\circ$ ; regular exterior  $= 360^\circ/n$ .

# Angle Reasoning, Congruence, Constructions and Loci

Use the formula/method guides in the consolidated solutions section. Award method marks where the setup is correct.

| Q | Answer / concise method                                                                                                                                                                                                                                                                                    | Mark<br>s | Check                                                 |
|---|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-------------------------------------------------------|
| 1 | Exterior= $51.4^\circ$ . Interior= $180^\circ$ -exterior= $129^\circ$ because the two angles form a straight line.                                                                                                                                                                                         | 2         | M1 method; A1 answer.                                 |
| 2 | The two right triangles share the perpendicular, have equal hypotenuses (the equal sides) and each has a right angle. They are congruent by RHS, so corresponding angles at the vertex are equal; each is $13^\circ$ .                                                                                     | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 3 | Use corresponding/alternate angles to transfer the given angles into the triangle. Triangle angles total $180^\circ$ , so the third angle is $180-40-63=77^\circ$ .                                                                                                                                        | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 4 | Exterior= $180-147.273=32.7273^\circ$ . Since exterior angles total $360^\circ$ , $n=360/(32.7273)=11$ .                                                                                                                                                                                                   | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 5 | Two corresponding sides and the included angle are equal, so the triangles are congruent by SAS. Therefore corresponding third sides and corresponding angles are equal.                                                                                                                                   | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 6 | The equidistant boundary is the internal angle bisector. "At most 3 cm" is the inside of a circle centre the vertex, radius 3 cm. Required locus is their intersection on the angle bisector.                                                                                                              | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 7 | Draw the diagonal joining an endpoint of one given side to the opposite vertex. The two triangles have the given equal sides, the shared diagonal and equal alternate angles from the parallel sides; SAS congruence gives the other opposite sides/angles equal, so the quadrilateral is a parallelogram. | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 8 | Interior sum= $(8-2)\times 180=1080^\circ$ . Ratio total=38. One unit= $1080/38=28.4^\circ$ . Multiply this by each ratio part.                                                                                                                                                                            | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |

| Q | Answer / concise method                                                                                                                                                                                                                                                                                    | Mark<br>s | Check                                                 |
|---|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-------------------------------------------------------|
| 1 | Use corresponding/alternate angles to transfer the given angles into the triangle. Triangle angles total $180^\circ$ , so the third angle is $180-58-67=55^\circ$ .                                                                                                                                        | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 2 | Exterior= $180-140=40^\circ$ . Since exterior angles total $360^\circ$ , $n=360/(40)=9$ .                                                                                                                                                                                                                  | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 3 | Two corresponding sides and the included angle are equal, so the triangles are congruent by SAS. Therefore corresponding third sides and corresponding angles are equal.                                                                                                                                   | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 4 | The equidistant boundary is the internal angle bisector. "At most 6 cm" is the inside of a circle centre the vertex, radius 6 cm. Required locus is their intersection on the angle bisector.                                                                                                              | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 5 | Draw the diagonal joining an endpoint of one given side to the opposite vertex. The two triangles have the given equal sides, the shared diagonal and equal alternate angles from the parallel sides; SAS congruence gives the other opposite sides/angles equal, so the quadrilateral is a parallelogram. | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 6 | Interior sum= $(6-2)\times 180=720^\circ$ . Ratio total=26. One unit= $720/26=27.7^\circ$ . Multiply this by each ratio part.                                                                                                                                                                              | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 7 | With two sides and a non-included angle, the third vertex may lie at two intersections of an arc and a ray. This can form two different triangles satisfying the same data, so SSA is not a congruence criterion.                                                                                          | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 8 | Exterior= $36^\circ$ . Interior= $180^\circ$ -exterior= $144^\circ$ because the two angles form a straight line.                                                                                                                                                                                           | 3         | M1 setup; M1 process; A1 conclusion.                  |

| 1 | CP=(1,-1); multiply by -3 and add C: P'=(-2,1).                                                                                                                                                                                                                                                       | 2         | M1 method; A1 answer.                                 |
| 2 | Area scale factor= $1.5^2=2.25$ . Larger area= $49 \times 2.25=110.25 \text{ cm}^2$ .                                                                                                                                                                                                                 | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 3 | Length scale factor= $\sqrt[3]{64}=4$ . Larger volume= $50 \times 64=3200 \text{ cm}^3$ .                                                                                                                                                                                                             | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 4 | A rotation of $180^\circ$ about the origin. Two reflections in intersecting lines give a rotation through twice the angle between the lines.                                                                                                                                                          | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 5 | Lengths, angles, area and orientation are preserved. A rotation followed by a translation is an orientation-preserving isometry and, unless the net effect is a translation, can be represented as a rotation about a different centre; locate it by perpendicular bisectors of point-image segments. | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 6 | Length factor= $(13)/10$ . Area factor= $[(13)/10]^2$ . Larger area= $40 \times [(13)/10]^2=67.6 \text{ cm}^2$ .                                                                                                                                                                                      | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 7 | A rotation multiplies each centre-to-point vector by a rotation matrix/turn of angle $\theta$ . The inverse turns by $-\theta$ , so the net turn is $0^\circ$ and the vector is unchanged. Hence every image returns to its original point.                                                           | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 8 | Magnitude of overall scale factor= $(3/2)(2/3)=1$ , so size is unchanged. The negative factor reverses each centre-to-point direction through the enlargement centre; because centres differ, the complete mapping must be determined point by point.                                                 | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |

| Q | Answer / concise method                                                                                                                                                                                                                            | Marks | Check                                                 |
|---|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------------------------------------------------------|
| 1 | Angle at centre is twice angle at circumference, so $\angle ACB = 24^\circ$ .                                                                                                                                                                      | 2     | M1 method; A1 answer.                                 |
| 2 | $\angle ACB = 90^\circ$ (angle in a semicircle). $\angle ABC = 180 - 90 - 43 = 47^\circ$ .                                                                                                                                                         | 3     | M1 setup; M1 process; A1 conclusion.                  |
| 3 | Opposite angles in a cyclic quadrilateral sum to $180^\circ$ , so $\angle ADC = 88^\circ$ .                                                                                                                                                        | 3     | M1 setup; M1 process; A1 conclusion.                  |
| 4 | By the alternate segment theorem, the angle subtended by chord AB at the opposite circumference is $38^\circ$ .                                                                                                                                    | 3     | M1 setup; M1 process; A1 conclusion.                  |
| 5 | $PB = 11$ cm. $OA = OB$ (radii), $OP$ is common and both radii are perpendicular to tangents, so triangles $OAP$ and $OBP$ are congruent by RHS; hence $PA = PB$ .                                                                                 | 4     | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 6 | The perpendicular from the centre bisects the chord. $r^2 = 4^2 + 4^2 = 32$ ; $r = \sqrt{32}$ cm.                                                                                                                                                  | 4     | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 7 | Angles in the same segment are equal: $x + 0 = 3x - 19$ ; $2x = 19$ ; $x = 9.5$ .                                                                                                                                                                  | 4     | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 8 | $OA$ and $OB$ are perpendicular to the tangents, so angles $OAP$ and $OBP$ are $90^\circ$ . Angles in quadrilateral $OAPB$ total $360^\circ$ , hence $\angle APB + \angle AOB + 180^\circ = 360^\circ$ and $\angle APB = 180^\circ - \angle AOB$ . | 5     | M1 setup; M2-M4 development; A1 conclusion.           |

| 3  | Angle $ACB=90^\circ$ (angle in a semicircle). $ABC=180-90-24=66^\circ$ .                                                                                                                                                                                       | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 4  | Opposite angles in a cyclic quadrilateral sum to $180^\circ$ , so $ADC=52^\circ$ .                                                                                                                                                                             | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 5  | By the alternate segment theorem, the angle subtended by chord AB at the opposite circumference is $44^\circ$ .                                                                                                                                                | 3         | M1 setup; M1 process; A1 conclusion.                  |
| 6  | $PB=7$ cm. $OA=OB$ (radii), $OP$ is common and both radii are perpendicular to tangents, so triangles $OAP$ and $OBP$ are congruent by RHS; hence $PA=PB$ .                                                                                                    | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 7  | The perpendicular from the centre bisects the chord.<br>$r^2=5^2+4^2=41$ ; $r=\sqrt{41}$ cm.                                                                                                                                                                   | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 8  | Angles in the same segment are equal: $x+0=3x-20$ ; $2x=20$ ; $x=10$ .                                                                                                                                                                                         | 4         | M1 setup; M1 development; A1 accuracy; A1 conclusion. |
| 9  | $OA$ and $OB$ are perpendicular to the tangents, so angles $OAP$ and $OBP$ are $90^\circ$ . Angles in quadrilateral $OAPB$ total $360^\circ$ , hence $APB + AOB + 180^\circ = 360^\circ$ and $APB = 180^\circ - AOB$ .                                         | 5         | M1 setup; M2-M4 development; A1 conclusion.           |
| 10 | Mark the $90^\circ$ angle in the semicircle and the radius-tangent $90^\circ$ . Use alternate segment or same-segment angles to transfer a chord angle, then use opposite cyclic angles sum $180^\circ$ and triangle angle sums. Give a theorem at every step. | 5         | M1 setup; M2-M4 development; A1 conclusion.           |

## U4-M10-Q01 [4 marks]

Arc length =  $(80/360) \times 2\pi \times 6 = 2.66667\pi$  cm. Area =  $(80/360) \times \pi \times 6^2 = 8\pi$  cm<sup>2</sup>.

## U4-M10-Q02 [4 marks]

Cosine rule:  $c^2 = 7^2 + 10^2 - 2(7)(10)\cos 50^\circ$ . Hence  $c = 7.68$  cm.

## U4-M10-Q03 [4 marks]

Sine rule:  $\sin B/10 = \sin 35^\circ/8$ , so  $\sin B = 0.71697$ . The acute solution is  $B = 45.8^\circ$ .

## U4-M10-Q04 [4 marks]

Area factor =  $1.4^2 = 1.96$ ; volume factor =  $1.4^3 = 2.744$ . Larger volume =  $250 \times 2.744 = 686.000$  cm<sup>3</sup>.

## U4-M10-Q05 [4 marks]

OP = OA +  $[2/(5)]AB = a + [2/5](b - a) = [3a + 2b]/5$ .

## U4-M10-Q06 [5 marks]

Midpoint = (5, 3). Segment gradient = -0.666667, so perpendicular gradient = 1.5. Therefore  $y = 1.5x - 4.5$ .

## U4-M10-Q07 [4 marks]

TSA =  $2\pi r^2 + 2\pi rh = 2\pi(3)^2 + 2\pi(3)(8) = 66\pi = 207$  cm<sup>2</sup>.

## U4-M10-Q08 [4 marks]

$AB = \sqrt{4^2 + 7^2} = 8.06$  km.  $\tan \theta = 4/7$ , so  $\theta = 29.7^\circ$ . Bearing = 029.7°.

## U4-M10-Q09 [4 marks]

Exterior =  $360/8 = 45^\circ$ . Interior =  $180 - 45 = 135^\circ$ . The vertex angle of the isosceles triangle is the interior angle, so each base angle =  $(180 - 135)/2 = 22.5^\circ$ .

## U4-M10-Q10 [4 marks]

Arc length =  $(85/360) \times 2\pi \times 7 = 3.30556\pi$  cm. Area =  $(85/360) \times \pi \times 7^2 = 11.5694\pi$  cm<sup>2</sup>.

## U4-M10-Q11 [4 marks]

Cosine rule:  $c^2 = 8^2 + 11^2 - 2(8)(11)\cos 53^\circ$ . Hence  $c = 8.89$  cm.

## U4-M10-Q12 [4 marks]

Sine rule:  $\sin B/11 = \sin 37^\circ/9$ , so  $\sin B = 0.73555$ . The acute solution is  $B = 47.4^\circ$ .

## U4-M10-Q13 [4 marks]

Area factor =  $1.5^2 = 2.25$ ; volume factor =  $1.5^3 = 3.375$ . Larger volume =  $300 \times 3.375 = 1012.500$  cm<sup>3</sup>.

## U4-M10-Q14 [4 marks]

$OP = OA + [3/(6)]AB = a + [3/6](b - a) = [3a + 3b]/6$ .

## U4-M10-Q15 [5 marks]

Midpoint = (6, 3). Segment gradient = -1, so perpendicular gradient = 1. Therefore  $y = 1x - 3$ .

## U4-M10-Q16 [4 marks]

$TSA = 2\pi r^2 + 2\pi rh = 2\pi(4)^2 + 2\pi(4)(9) = 104\pi = 327$  cm<sup>2</sup>.

## U4-M10-Q17 [4 marks]

$AB = \sqrt{5^2 + 8^2} = 9.43$  km.  $\tan \theta = 5/8$ , so  $\theta = 32.0^\circ$ . Bearing =  $032.0^\circ$ .

## U4-M10-Q18 [4 marks]

Exterior =  $360/9 = 40^\circ$ . Interior =  $180 - 40 = 140^\circ$ . The vertex angle of the isosceles triangle is the interior angle, so each base angle =  $(180 - 140)/2 = 20^\circ$ .

## U4-M10-Q19 [4 marks]

Arc length =  $(90/360) \times 2\pi \times 8 = 4\pi$  cm. Area =  $(90/360) \times \pi \times 8^2 = 16\pi$  cm<sup>2</sup>.

## U4-M10-Q20 [4 marks]

Cosine rule:  $c^2 = 9^2 + 12^2 - 2(9)(12)\cos 56^\circ$ . Hence  $c = 10.2$  cm.

## U4-M10-Q21 [4 marks]

Sine rule:  $\sin B/12 = \sin 39^\circ/10$ , so  $\sin B = 0.75518$ . The acute solution is  $B = 49.0^\circ$ .

## U4-M10-Q22 [4 marks]

Area factor =  $1.6^2 = 2.56$ ; volume factor =  $1.6^3 = 4.096$ . Larger volume =  $350 \times 4.096 = 1433.600$  cm<sup>3</sup>.

## U4-M10-Q23 [4 marks]

$OP = OA + [4/(7)]AB = a + [4/7](b - a) = [3a + 4b]/7$ .

## U4-M10-Q24 [5 marks]

Midpoint =  $(7, 3)$ . Segment gradient =  $-1.33333$ , so perpendicular gradient =  $0.75$ . Therefore  $y = 0.75x - 2.25$ .

## U4-M10-Q25 [4 marks]

$$TSA = 2\pi r^2 + 2\pi rh = 2\pi(5)^2 + 2\pi(5)(10) = 150\pi = 471 \text{ cm}^2.$$

## U4-M10-Q26 [4 marks]

$$AB = \sqrt{6^2 + 9^2} = 10.8 \text{ km. } \tan \theta = 6/9, \text{ so } \theta = 33.7^\circ. \text{ Bearing} = 033.7^\circ.$$

## U4-M10-Q27 [4 marks]

Exterior  $= 360/10 = 36^\circ$ . Interior  $= 180 - 36 = 144^\circ$ . The vertex angle of the isosceles triangle is the interior angle, so each base angle  $= (180 - 144)/2 = 18^\circ$ .

## U4-M10-Q28 [4 marks]

$$\text{Arc length} = (95/360) \times 2\pi \times 9 = 4.75\pi \text{ cm. Area} = (95/360) \times \pi \times 9^2 = 21.375\pi \text{ cm}^2.$$

## U4-M10-Q29 [4 marks]

$$\text{Cosine rule: } c^2 = 10^2 + 13^2 - 2(10)(13)\cos 59^\circ. \text{ Hence } c = 11.6 \text{ cm.}$$

## U4-M10-Q30 [4 marks]

$$\text{Sine rule: } \sin B/13 = \sin 41^\circ/11, \text{ so } \sin B = 0.77534. \text{ The acute solution is } B = 50.8^\circ.$$

## U4-M10-Q31 [4 marks]

$$\text{Area factor} = 1.7^2 = 2.89; \text{ volume factor} = 1.7^3 = 4.913. \text{ Larger volume} = 400 \times 4.913 = 1965.200 \text{ cm}^3.$$

## U4-M10-Q32 [4 marks]

$$OP = OA + [5/(8)]AB = a + [5/8](b - a) = [3a + 5b]/8.$$

## U4-M10-Q33 [5 marks]

Midpoint=(8,3). Segment gradient=-1.66667, so perpendicular gradient=0.6. Therefore  $y=0.6x-1.8$ .

## U4-M10-Q34 [4 marks]

$TSA=2\pi r^2+2\pi rh=2\pi(6)^2+2\pi(6)(11)=204\pi=641 \text{ cm}^2$ .

## U4-M10-Q35 [4 marks]

$AB=\sqrt{7^2+10^2}=12.2 \text{ km}$ .  $\tan \theta=7/10$ , so  $\theta=35.0^\circ$ . Bearing= $035.0^\circ$ .

## U4-M10-Q36 [4 marks]

Exterior= $360/11=32.7273^\circ$ . Interior= $180-32.7273=147.273^\circ$ . The vertex angle of the isosceles triangle is the interior angle, so each base angle= $(180-147.273)/2=16.3636^\circ$ .

## U4-M10-Q37 [4 marks]

Arc length= $(100/360)\times 2\pi\times 10=5.55556\pi \text{ cm}$ . Area= $(100/360)\times \pi\times 10^2=27.7778\pi \text{ cm}^2$ .

## U4-M10-Q38 [4 marks]

Cosine rule:  $c^2=11^2+14^2-2(11)(14)\cos 62^\circ$ . Hence  $c=13.1 \text{ cm}$ .

## U4-M10-Q39 [4 marks]

Sine rule:  $\sin B/14=\sin 43^\circ/12$ , so  $\sin B=0.79566$ . The acute solution is  $B=52.7^\circ$ .

## U4-M10-Q40 [4 marks]

Area factor= $1.8^2=3.24$ ; volume factor= $1.8^3=5.832$ . Larger volume= $450\times 5.832=2624.400 \text{ cm}^3$ .

## U4-M10-Q41 [4 marks]

$$OP = OA + \left[\frac{6}{9}\right]AB = a + \left[\frac{6}{9}\right](b-a) = \left[\frac{3a+6b}{9}\right]$$

## U4-M10-Q42 [5 marks]

Midpoint = (9, 3). Segment gradient = -2, so perpendicular gradient = 0.5. Therefore  $y = 0.5x - 1.5$ .

## U4-M10-Q43 [4 marks]

$$TSA = 2\pi r^2 + 2\pi rh = 2\pi(7)^2 + 2\pi(7)(12) = 266\pi = 836 \text{ cm}^2.$$

## U4-M10-Q44 [4 marks]

$$AB = \sqrt{8^2 + 11^2} = 13.6 \text{ km. } \tan \theta = 8/11, \text{ so } \theta = 36.0^\circ. \text{ Bearing} = 036.0^\circ.$$

## U4-M10-Q45 [4 marks]

Exterior =  $360/12 = 30^\circ$ . Interior =  $180 - 30 = 150^\circ$ . The vertex angle of the isosceles triangle is the interior angle, so each base angle =  $(180 - 150)/2 = 15^\circ$ .
